Event Report:

The event took place on the 23-24 October in two fazes: in the morning (10 am local time) Planetarium presentations and in the evening (from 6pm local time) Galilean Nights Presentations and Observations, held at the Astronomical Observatory of Timisoara. Very enthusiastic public, but not in large numbers as for other evens for this year. The weather was bad, heaving just a few minutes every night to show the Moon, Jupiter and some stars to the public. To compensate for the bad weather we held an open astronomy discussion with the visitors, encouraging the to ask as any questions. Also there were held some presentations of the Observatory and Discussions about the instruments present, future observations outside the city, future events in the city.
