

**Galilean Nights Event ID:** gn1,113

**Number of telescopes:** 3

**Number of organisers:** 2

**Number of attendees:** 8

**Event Report:**

At the start of the event we had scattered clouds but we were able to view the Moon, Jupiter and it's 4 Galilean moons. Everyone was amazed that Io is the size of our Moon and the others are even larger. An hour and a half into the observation the clouds moved in and we had to shut down early.
