

**Galilean Nights Event ID:** gn1,191

**Number of telescopes:** 4

**Number of organisers:** 4

**Number of attendees:** 200

**Event photos:** <http://picasaweb.google.ro/etaandromedae/NoptiGalileeneLaClujNapoca#>

**Event Report:**

People could watch Jupiter, the Moon, and some deep sky objects through our telescopes. Explications and details were given. Meanwhile, images taken by Hubble Space Telescope were shown to the crowd. On 23-rd of October some clouds ruined our late night plans, but on 24-th of October the sky was clear.
