

Galilean Nights Event ID: gn100

Number of telescopes: 3

Number of organisers: 6

Number of attendees: 25

Event Report:

Weather was cloudy all day and into the evening. Clouds parted half way through the scheduled observing time, then we had nice viewing of Moon and Jupiter.

We used a 10" Newtonian, a 4 1/4" Cassegrain, and a pair of binoculars for the viewing.

Several people asked questions more than observed the objects through the telescopes.

Coffee was great!
