

Galilean Nights Event ID: gn138

Number of telescopes: 20+

Number of organisers: 12

Number of attendees: 150

Event Report:

The MAS event was held at Onan Observatory which has a wealth of equipment. Unfortunately it was cloudy and rainy both nights. Both evenings we had two very good presenters who captivated their audiences. We also were able to provide "guided tour" explanations of the various telescopes available, and also showed videos of solar system and deep sky objects that were recorded during observing sessions at Onan earlier in the year. Thanks to Merle for organizing it, Bill and Ron for presenting to the audiences.
