

Galilean Nights Event ID: gn17

Number of telescopes: 4

Number of organisers: 5

Number of attendees: 60

Event Report:

Clear skies again for a Galilean Moon Watch and good views of Jupiter through Lockyer 6" refractor and 10" Kensington refractor at the Norman Lockyer Observatory. A 10" Dobsonian gave good views of Andromeda galaxy, and a 10" Celestron on a computerised AltAZ mount was conducting a great tour of the universe. Not only were there clear skies, but also a talk and presentation on the formation of the Moon followed by a planetarium show, gave the visitors plenty of interest.
