Event Report:

It was scheduled for a 7pm start before dark as we were presenting a talk on Jupiter. At start time not too many people were here including the speaker! So everyone got the chance to have a tour of the telescopes which were already set up in preparation on the school field. An hour later after views of the Moon and even Jupiter before dark, we went inside the school hall and watched a most fascinating talk. Feedback from one family said it was so great to see some vitality brought to astronomy and it really showed in what we were doing. They cant wait for the next one.
