**Event Report:**

The registered Galilean Nights event of Dunaújvárosi Amatőrcsillagász Egyesület unfortunately was in default because of the bad weather. Our event was planned on 24th October 2009, but it was cloudy all over in Hungary. Instead of this cancelled event we organized another event on 13th November 2009, which took place in Baracs at village hall (46.913765, 18.865841). We had a power point performance about solar system and Hubble telescope. We brought Galileo into prominence, we were talking about his life and his findings. Our performance was closed with a film titled „The dream is alive”. It was about astronauts. The performance was successful. There were 70 people who were also invited to an astronomical performance with 2 telescopes. We presented the Planet Jupiter and moons by Galileo and some Deep Sky objects.
