

Galilean Nights Event ID: gn227

Number of telescopes: 3

Number of organisers: 5

Number of attendees: 100

Event Report:

Participants of our Galilean night first spent 30 minutes learning about stars and constellations in the Starlab portable planetarium in the Stansnsberry Elementary School gym. Ways to find constellations, myths, legends, and stories were shared. After this, telescopes on the playground focused on the moon, star clusters, and Jupiter. The view of the 4 moons of Jupiter was awesome. Hot chocolate and a drawing for a Galilean telescope completed the evening. an unofficial Galilean Night #2 will be held on November 13.
