

Galilean Nights Event ID: gn234

Number of telescopes: 4

Number of organisers: 5

Number of attendees: 250

Event Report:

The first 2 nights were rain/clouded out. On Saturday afternoon 2 of us set up three telescopes and viewed the sun in white light and Ha and the moon. Before sundown another member came and began showing Jupiter. We had many kids stop by and 1 little girl (about 8 yrs old) with her mother and aunt stayed more than 2 hours! They became our newest club members and came to our next general meeting.
