Event Report:

Galilean Nights were a total success in Planetario de la Ciudad de Buenos Aires "Galileo Galilei": in the nights of Thursday 22th and Saturday 24th (Friday 23th it was clouded), between 9 pm and 1 am), we received more than 1.200 visitors in total. More than half of that number were children. We used the 2 biggest telescopes of our Planetarium (12 and 11 inches Schmidt-Cassegrains) to see Moon and Jupiter. Also, we projected a lot of images in a giant screen about Galileo's life and contributions to astronomy.

This was one of our biggest IYA events, but still not the last!
