

Galilean Nights Event ID: gn260

Number of telescopes: 5

Number of organisers: 3

Number of attendees: 17

Event Report:

On October 22, seventeen patrons met Johannes Kepler from the Johannes Kepler Project. He taught them about the foundations of modern astronomy and "Galileo's Heavenly Discoveries". Patrons were fascinated to learn how astronomy, astrology, politics and historical events were all interconnected 400 years ago. Afterward, the Cuyahoga Astronomical Association was there for stargazing as part of the worldwide celebration of Galilean Nights. Because the sky was completely overcast, the volunteers talked about how to use a telescope and showed the patrons equipment they use for astrophotography and telescopes for viewing different kinds of celestial bodies.
