

Galilean Nights Event ID: gn27

Number of telescopes: 2

Number of organisers: 5

Number of attendees: 4785

Event Report:

After having a successful program for 100 hours of astronomy, UniverseAlive became the only official cooperator from Iran which participated in remote observatory project at Galilean night on 24 October 2009. There were over 4785 viewers and listeners from all over the world participating in our 1.5 hour program. They had registered themselves in www.universealive.com .

The program started at 15:00 UT and our telescopes were pointed to the Jupiter, Galilean moons and the Moon exclusively and showed their images through over live pictures. Also some Iranian scientists images attached to live images of sky.

Users could be in touch with the UniverseAlive team experts by chatting and listening to their voice and explanations in two languages, Persian and English.

Galileo's biography, the history of his scientific examinations, discoveries and books, the secret societies, the introduction of Iranian scientists, the report of other Iranian group activities at these nights were the other main items of this live program.

Users could listen to some piece of native Iranian music, and specially the Galileo's voice talking about himself (Simulation animation). For the sake of this night and Iranians enthusiasm for Astronomy and its related scientists, the animation of Galileo with his voice is available on our website at <http://www.universealive.com> .

Participating in K1 observatory programs at Galilean Nights remote observatory project, usres had opportunity to register their names and receive K1 certificate by filling its special form on the live program web page.

With the best thanks from Terry Bridges, Director of Galilean Nights remote observatory project.
