Event Report:

Simultaneous to our event in Muenster started the official opening of the "Send", a large fair in the central city on october 23. with great fireworks. We assembled our telescopes (6 inch Astrophysics, 4 inch Vixen refractors, 130mm Newtonian and a travellscope) on the central place of Muenster infront of the St. Pauls-Cathedral. We choosed this location because of the many passersby on the way to the "Send" (in intervals 10 to 20 and more) and since attend the people about Lightpollution. In the periode 6 - 9.30 pm we show Jupiter and his moons. Many people take their first look through a telescope and were amazed that so many details can be identified. In the later evening the sky became cloudy and we decompose our instruments
