Event Report:

On october 24, it was raining all the time, yet, our 3 clubs, the Astroclub Vega, Astronamur and the CAO, managed to organize the promised conferences (about Galileo and about light pollution from then to now) and as asked by the planetarium, we distributed the galileoscopes to winners of a competition (all children) with the presence of the highest science authorities of the country, mrs Sabine Laruelle (the federal science minister) who was quite impressed how much small clubs can achieve when motivated and dynamic.
