

**Galilean Nights Event ID:** gn769

**Number of telescopes:** 5

**Number of organisers:** 5

**Number of attendees:** 40\*

**Event Report:**

Unfortunately there was a bad weather at Cuiabá in this Galilean night. It rained by the end of the afternoon. It was a very cloudy night on the time scheduled to the observation beginning. Even the Moon was not observable. In spite of this, around 40 people went to the venue, but the observation had to be cancelled. Weather prediction was not good for the region, and our B plan was doing the Galilean nights in 3 different places of Mato Grosso state waiting for succeeding the observations in, at least, one of them. As there were many activities at the "Universidade Federal de Mato Grosso" during 2009 year we decided not making a special B plan at this Galilean night because the team had to travel inward early the next morning. There was a better, but still cloudy night in our next event, "Galileu no Pantanal", but we HAD a gorgeous Galilean night in our third event, "Galileu Rural".
