

Galilean Nights Event ID: gn885

Number of telescopes: Only one telescope was used

Number of organisers: 1

Number of attendees: 70

Event Report:

The event went well but the first day the event was effected by the cloud for some extent eventhough there were many attendees and particularly students from different levels.

The main activities that took place in our ground were concerning with:

1. Star – gazing activitie.
2. The position and appearence of moon.
3. The position and appearence of the planet Jupiter.
4. Slide show through computers and slide projectors.
5. Different quiz games.

The activities were affected by the following:

1. Few numbers of telescopes (only one was used).
2. Cameras for taking phtograph were not good.

The interactions with the attendees were good since everybody was interested to know and see what are going on for both days of event and particularly for the last day to observe the rocket which is moving nearby the planet Jupiter was really interested ones.

Suggestions:

1. We would like to have more than one telescope.
2. We need the text and reference books concerning with astronomy and geophysics articles.
3. We appreciate to have various workshops and other related activities about the sky.
