

**Galilean Nights Event ID:** gn1,000

**Number of telescopes:** 5

**Number of organisers:** 2

**Number of attendees:** 55+

**Event Report:**

Great weather, We observed the Moon and Jupiter. The kids loved Jupiter best. We observed polar constellations, teapot, milkyway and albireon. I set up a small scope for hands on activities. We provided refreshments, milkyways, starburst, and Moon Pies. Our IT instructor and cohost, Carolyn Lowry, organized some of the students to bake cup cakes. Our students were so excited Friday morning that I promised them another party the end of January. Several parents have offered to help. We had 55+ in attendance which is pretty good considering our total enrollment is only 148.
