

**Galilean Nights Event ID:** gn1,151

**Number of telescopes:** 2

**Number of organisers:** 1

**Number of attendees:** 20

**Event Report:**

The night was good, although cloud cover affected us from time to time. About 20 people came and looked through the GCS 6 inch refractor. When clear, we were able to clearly make out Jupiter's bands, and 4 of its G moons.

Besides looking at Jupiter, we saw the waxing gibbeous moon, and a quick peek at the Andromeda Galaxy. The night went from 7 pm to about 10:30 pm.
