

Galilean Nights Event ID: gn156

Number of telescopes: 2

Number of organisers: 6

Number of attendees: 25

Event Report:

The Edgewood Library invited us to participate in their "Harry Potter's World" events. Our presentation was about Renaissance Astronomy. There was a presentation about astronomy by one of our members, a display of meteorites and lunar samples. Visitors then went outside to look through our telescopes. We set up two telescopes for the visitors. One was a Galileoscope allowing the visitors to view the moon and Jupiter with similar optics to what Galileo used.
