

Galilean Nights Event ID: gn167

Number of telescopes: 1

Number of organisers: 2

Number of attendees: 35

Event Report:

On Oct. 24th 35 guests, with 10 of those being children, attend our Galilean Nights event that was held at our home in Franklin, TN, USA.

The weather was excellent for viewing the moon and Jupiter.

Many of our friends know I am an amateur astronomer and for many years wanted to experience using a telescope.

The experience exceeded their expectations!!!

Our guest came back to the eyepiece at least two times to view the same object after their initial orientation.

I wanted our guest to have time with the telescope without me hovering over them and I really think they enjoyed that aspect of the event.

I got constant reports of how the "seeing" varied and the details that would jump out during a moment of good seeing.

I personally think people had as much fun operating the telescope as they did viewing the moon and Jupiter.
