

**Galilean Nights Event ID:** gn843

**Number of telescopes:** 3

**Number of organisers:** 1

**Number of attendees:** nil

**Event Report:**

Unfortunately the weather was atrocious with heavy ran and strong winds all evening. Typically the other nights that we did not choose were perfect. There was no plan B as this would not have been possible because of the location. This was a shame as the school has just acquired a new 10" Dobsonian the students were looking forward to using for the first time and to show case it to the local community. Botany Downs Secondary Colleges' Astronomy Club has around 40 members (established 2009) who are very enthusiastic about astronomy. I am sure we will have plenty of opportunities to makeup for this failure.
