Event Report:

Despite this event was at 12h00 pm we decided to included it in the Galilean Nigths since Galileu was the first man to saw Sun spots!This event was one of the many that the Astronomy Group of the University of Madeira included in IYA2009 - Madeira. In fact this was the 208th event that we have done this year. And for the first time, despite some clouds in the sky, we saw sun spots this year! So it was rewarding for us and the 28 people who attended the event.
